

QA Audit & Software Testing Report: Swag Labs E-Commerce Platform

Project Scope & Objective :The objective of this project was to perform a manual functional and UI/UX audit of the Swag Labs "Standard User" journey. The testing focused on identifying "blockers"—issues that prevent a customer from successfully selecting a product and completing a payment.

Analysis of Authentication, Cart Management, and
Checkout Workflows

Part 1: Formal Bug Reports

These reports are designed to help a developer understand exactly what needs to be fixed.

Bug 1: UI/UX - Error Message Formatting

- **Title:** Login error message displays "Epic sadface" text instead of an emoji.
- **Severity:** Low (Visual/Polish).
- **Steps to Reproduce:** 1. Navigate to the Login page. 2. Enter an incorrect username or password. 3. Click the "Login" button.
- **Expected Result:** A graphical emoji should appear with the error message.
- **Actual Result:** The text "Epic sadface" is displayed instead of a graphic.

Bug 2: Functional - Missing Apparel Attributes

- **Title:** Absence of size selection for T-shirt items.
- **Severity:** Critical (Prevents correct order fulfillment).
- **Steps to Reproduce:**
 1. Select a T-shirt item (e.g., "Test.allTheThings() T-Shirt").
 2. Attempt to select a size before adding to the cart.
- **Expected Result:** User should be prompted to select a size (S, M, L, XL).
- **Actual Result:** No size selection option exists, and no size is displayed on the checkout page.

Bug 3: Functional - Cart Quantity Management

- **Title:** No option to increase or modify item quantity in the cart.
- **Severity:** High (Impacts User Experience and Revenue).
- **Steps to Reproduce:**
 1. Add an item to the cart (e.g., Sauce Labs Backpack).
 2. Navigate to the "Your Cart" page.
 3. Attempt to change the quantity (QTY) from 1 to a higher number.
- **Expected Result:** Users should be able to type a new quantity or use +/- buttons.
- **Actual Result:** The quantity field is non-editable or lacks adjustment controls.

QTY Description

1

Sauce Labs Backpack

carry.allTheThings() with the sleek, streamlined Sly Pack that melds uncompromising style with unequaled laptop and tablet protection.

\$29.99

1

Sauce Labs Bike Light

A red light isn't the desired state in testing but it sure helps when riding your bike at night. Water-resistant with 3 lighting modes, 1 AAA battery included.

\$9.99

Payment Information:

SauceCard #31337

Shipping Information:

Free Pony Express Delivery!

Price Total

Item total: \$39.98

Tax: \$3.20

Total: \$43.18

Bug 4: Functional - Incomplete Checkout Workflow

- **Title:** Checkout flow completes without requesting payment method selection.
 - **Severity:** Critical (Functional blocker for real-world transactions).
 - **Steps to Reproduce:**
 1. Add items to the cart and proceed to "Checkout".
 2. Enter shipping information.
 3. Observe the final overview page.
 - **Expected Result:** The system must ask for a payment method (Credit Card, PayPal, etc.) before showing a final total.
 - **Actual Result:** The app skips payment selection and goes directly to a summary.
-

Part 2: Test Execution Report

This provides a "Big Picture" look at the health of the application.

Project: Swag Labs E-commerce Web App

Tester Role: Junior QA Intern

Date: March 28, 2026

Test Execution Summary: Swag Labs Shopping Flow

Project Overview: This report details the manual functional and UI testing performed on the Swag Labs e-commerce platform. The objective was to validate the end-to-end user journey from login to checkout completion.

Executive Summary: The current build of the application is **Not Ready for Production**. While core authentication and price calculation logic are functioning correctly , critical functional gaps in the cart management and checkout workflows prevent a user from completing a standard purchase.

1. Feature Status Dashboard

Feature	Status	Observation / Key Findings
User Authentication	✅ PASSED	Valid credentials (e.g., <code>standard_user</code>) successfully grant access to the inventory.
Error Handling (UI)	❌ FAILED	Negative login attempts return a "sadface" text string instead of a graphical icon.
Cart Functionality	❌ FAILED	Critical missing features: No size selection for apparel and no quantity adjustment.

Mathematical Logic	✓ PASSED	The system correctly calculates Tax (\$3.20) and Total (\$43.18) based on sub-totals.
Checkout Workflow	✗ FAILED	The process terminates without a payment gateway or order tracking confirmation.

2. Quantitative Results

- Total Test Scenarios: 5
- Total Passed: 2
- Total Failed: 3
- Overall Pass Rate: 40%

3. Critical Recommendations

1. **Implement Attribute Selection:** Add size/color dropdowns for apparel items to ensure order accuracy.
2. **Enable Quantity Control:** Add a numerical input or "+/-" toggle in the cart to allow users to purchase multiple units.
3. **Payment Integration:** Integrate a mock or real payment gateway (Credit Card/UPI) to complete the checkout logic.
4. **UI Polish:** Replace the "Epic sadface" placeholder text with the intended graphical

-
- **Total Scenarios Tested:** 5 Key Areas
 - **Passed:** 2 (Login, Price/Tax Logic)
 - **Failed:** 3 (Error UI, Cart Management, Checkout Workflow)
 - **Pass Percentage:** 40%

3. Conclusion:

The application is currently in a **"Non-Releasable"** state. While the basic login and pricing calculations are accurate, the core e-commerce functions (size selection, quantity adjustment, and payment processing) are missing or incomplete. These must be addressed before the app can be used by real customers.
